(Held in 2023)

BOTANY

Paper : BOTSE3012

(Biofertilizers)

(Theory)

Full Marks : 50

Pass Marks : 20

Time : 2 hours

The figures in the margin indicate full marks
for the questions

1. Answer the following as directed : $1 \times 5 = 5$
- Name the nitrogen fixers found in rice fields associated with Azolla.
 - Who discovered the microorganism?
 - Cyanobacterial cells which are specialized for nitrogen fixation are
 - hormogonia
 - heterocysts
 - trichomes
 - conidia
- (Choose the correct answer)

(Turn Over)

(3)

(2)

(d) Rhizobium is a ____ bacteria.

- (i) aerobic Gram-positive
- (ii) aerobic Gram-negative
- (iii) anaerobic Gram-positive
- (iv) anaerobic Gram-negative

(Fill in the blank)

(e) "Strawberry is a host plant which support large scale production of inoculum."

(Write Yes or No)

2. Answer the following questions : $2 \times 5 = 10$

- (a) Write the scope of biofertilizers.
- (b) Differentiate between aerobic and anaerobic composting.
- (c) Write the systematic position of azotobacter.
- (d) Explain Azolla as a biofertilizer.
- (e) What do you mean by organic farming?

3. Write notes on any five of the following :

$5 \times 5 = 25$

- (a) Green manure
- (b) Process of nodulation in legumes

KB23/464

(Continued)

- (c) Recycling of biodegradable agricultural waste
- (d) Component of YEMA medium
- (e) Actinorhizal symbiosis
- (f) Azospirillum as biofertilizer
- (g) Starter or mother culture

4. Answer any one of the following questions : 10

- (a) What is mycorrhiza? Differentiate between ecto- and endo-mycorrhiza. Write the role of mycorrhiza in response to the plant developments. $1+2+7=10$
- (b) Define vermicomposting. Discuss various methods of vermicomposting. What are the advantages of vermicomposting? $2+5+3=10$
